

Solo GP / Family Practice

Prospective client. AI Knowledge Assistant.

OPENING

A patient calls back for a follow-up. The notes from three visits ago are somewhere in the system, but finding them means stopping to search instead of picking up where the conversation left off.

SITUATION

The practice runs a separate consulting office from the exam room. Visit notes, test results, and history accumulate across both, entered at different points, and finding a specific past detail means searching for it rather than already knowing it.

COMPLICATION

That search costs time in the middle of a consultation, right when a patient is sitting across the desk waiting. And what doesn't get searched doesn't get used, so patterns across visits are easy to miss.

RECOMMENDATION: AI KNOWLEDGE ASSISTANT

A system that surfaces a patient's past visit notes and test results the moment their file is opened, so context is already there instead of hunted for. Not a full records overhaul. Just faster access to what's already recorded.

PROOF

Early engagement. No case study yet for this specific offer.

THE ASK

Let's set up a short discovery call to see how patient history is currently recorded and searched today, before we scope pricing.

DRAFT. REQUIRES HUMAN REVIEW AND APPROVAL BEFORE THIS IS SENT, EMAILED, OR PUBLISHED ANYWHERE.

Illustration Brief

Grounded in the Discovery Q&A for this pitch — the practice's actual desk, office layout, and setting.
